

Jake Gaylor

I build systems a stranger can run on day one.

15+ years across SaaS, AI, infrastructure, and IoT. At Cloaked I led the move off a legacy PaaS onto AWS EKS, made deploys 30x faster in six months, and ran that platform as its one-person ops team while the product grew from hundreds of users to hundreds of thousands under SOC 2 and ISO 27001. At CyberGRX I rebuilt a quarterly, manual deploy process and had every engineer shipping on it within 3 days. Agents have been in my production systems since LangChain was new, and today a fleet of coding agents builds Managoat, the hosted agent platform I run, under my review.

Work

Co-Founder Jan 2026 – May 2026 · 4 mos

Ravi

Cofounded an agent-native SaaS where AI agents manage their own accounts, secrets, and 2FA.

- Raised a \$400K pre-seed from South Park Commons on the usage data from a v1 instrumented from day one
- Grew to hundreds of users
- Shipped it end to end, a web SaaS and a Flutter app on the App Store, from prototypes started in 2024
- Designed agent-native account, secret, and 2FA management so AI agents can operate their own identities

Staff Software Engineer May 2025 – Jan 2026 · 8 mos

Block Party (acquired by DeleteMe)

Built internal AI and developer tooling for the engineering org until Block Party was acquired by DeleteMe in January 2026.

- Designed and built the framework behind the company's internal AI coding bots, treating the agent as another consumer of the developer platform

Staff Platform Engineer → Staff Product Engineer Sep 2022 – May 2025 · 2 yrs 8 mos

Cloaked Inc

Started in platform engineering with the AWS EKS migration, GitOps CI/CD, and compliance, then moved into product to build autonomous AI agents and the ideation portal behind a sticky, AI-powered onboarding experience.

- Led the migration from a legacy PaaS to AWS EKS with a multi-account model meeting SOC 2, ISO 27001, and ISO 27701 requirements, and it came out cheaper with more headroom than what it replaced
- Built a GitOps-based CI/CD pipeline that accelerated deployments 30x in my first 6 months
- Carried that platform from hundreds of users to hundreds of thousands without a rebuild, as its solo ops team
- Built an end-to-end product-analytics stack that enabled data-driven decisions across the company
- Built autonomous AI agents with LangChain that log in to user accounts to change passwords and swap the email on file, then made them a core fundraising narrative and an onboarding experience that lifted retention
- Launched a cross-functional ideation portal nearly the whole org used, one board from idea to usage report for design, product, engineering, and executives

Owner / Co-GM Oct 2021 – Jan 2024 · 2 yrs 3 mos

The Onward Store Steakhouse

Owned and ran a full-service steakhouse with my wife, 7 staff and \$500K a year in business revenue, P&L on me.

Staff SWE in Developer Experience Jun 2020 – Jun 2022 · 2 yrs

Inception Health

Designed the AWS CDK patterns that product and mobile teams used to ship HIPAA-compliant patient-care microservices themselves, and left both teams running their own deploys.

Senior Platform Engineer

Dec 2018 – Jun 2020 · 1 yr 6 mos

CyberGRX (now ProcessUnity)

Rebuilt build and deploy at a company where shipping was a quarterly manual event, and had roughly 50 engineers across several teams deploying on demand within 3 days.

Senior Cloud Platform Engineer

Jan 2018 – Dec 2018 · 11 mos

Cardfree

Ran a large-scale PCI-compliant C# installation in AWS and took the hand-built hosts out of it, with every Windows and Linux server coming from one Packer build.

Senior DevOps Engineer

Aug 2016 – Jan 2018 · 1 yr 5 mos

Protectwise, Inc (Acquired by Verizon)

SRE for a petabyte-scale ingestion platform, thousands of Cassandra nodes and Kafka pipelines on a \$10M+/yr AWS environment run entirely as code.

DevOps Engineer

Jun 2015 – Mar 2016 · 9 mos

Food Service Warehouse

Ran production Kubernetes on vSphere in 2015, the year it hit 1.0, and put the Node.js services on the fastest release cycle in the company.

Software Developer

Jun 2010 – Jun 2014 · 4 yrs

Mississippi State University

Created grant proposals and custom software for research initiatives

Skills

AI & Agent Engineering

Built Cloaked's autonomous LangChain agents and turned them into a fundraising narrative, then cofounded Ravi so agents can run their own accounts and secrets.

MCP Servers & SDKs, Agent Orchestration & Sandboxing, LLM Integration, Agent-Native Product Design, Agent Memory, LangChain

Programming Languages

Shipped Ravi's Flutter app to the App Store in Dart, wrote CyberGRX's blue/green operator in Go, and put Food Service Warehouse's Node.js services on the fastest release cycle in the company in 2015.

TypeScript, Javascript, Python, Go, Bash, Dart

Observability

Built the product-analytics stack that taught Cloaked to make data-driven decisions; my homelab pages my phone through Prometheus and Grafana.

Prometheus, Grafana, Loki, Pagerduty, CloudWatch, Product Analytics

Cloud Infrastructure

Led Cloaked's migration to AWS EKS under SOC 2 and ISO 27001; administered a \$10M+/yr AWS environment at Protectwise, acquired by Verizon.

AWS, Kubernetes (EKS, GKE, k3s), Terraform, Tailscale, Cloudflare, Infrastructure as Code

Data & Storage

Ran thousands of Cassandra nodes and petabytes of S3 on Protectwise's ingestion platform.

PostgreSQL, Redis, Cassandra, DynamoDB, S3-compatible Object Storage, MongoDB

Product Engineering

Turned Cloaked's AI agents into an AI-powered onboarding experience that lifted adoption and retention; grew Ravi to hundreds of users.

Data-driven Iteration, Feature Development, User Feedback Loops, MVP Development, Product Analytics

GitOps & CI/CD

Built the GitOps pipeline that accelerated Cloaked's deploys 30x; Flux CD reconciles my homelab from git the same way.

Flux CD, ArgoCD, Argo Workflows, Github Actions, SOPS, Continuous Deployment

Distributed Systems

SRE for Protectwise's petabyte-scale event ingestion platform, the largest-scale system I've operated.

Kafka, RabbitMQ, AWS IoT, Event-Driven Architecture

Product & Business

Raised Ravi's \$400K pre-seed from South Park Commons; ran a \$500K/yr steakhouse with my name on the P&L.

Roadmapping, Customer Discovery, P&L Management, Go-to-Market Strategy, Fundraising

Languages: English (native speaker)
